

Progress report № 10.

ID: 200103158, 200103484

Names: Sanzhar Issabekov, Bexultan Saifullin

This is the last progress report. In the last progress report, there are things below that have been done.

What we did?

- After introduction of the architecture-based Handler-Service-Repository, it was included in our project by connecting database through Docker;
- By using bd postgres sql after connecting the database through the Docker and docker-compose up -d command, we can be certain that the connection with database is successful;
- Added files service and repository.go files for server;
- Upgraded the handler.go file respectively;
- By adding and creating new files, the dependency injection between the server and database has been created.
